TASK 1:

1. Create a basic webpage using Django which has a file uploader to upload the given Input.xlsx
2. Create a button which will upload the following file and store it in the database. (Use Django's default database SQLite)
3. On the same click the data should be retrieved from the database and transform it to the given format (refer the given Output.xlsx) and save the Output.xlsx in Output Folder.

Note: After clicking upload button give a sleep of 5 Seconds and show the progress bar or loading animation.
